

LID Digital Text Label

Version 1
21 Oct 2021

Technical Diagram

*Speak to the text label in your native language to
change the translation....*

Digital label is mounted on wall for presentation. AI Server and audio interface are to be hidden.

Best presentation would be digital label power, ethernet, & audio cables routed through hole behind display. Secondary presentation would be bundling cables within some sort of white cable snake.

Distance sensor will use a 2-3 meter range in front of the display.

Note: Goal in future versions is to integrate AI server software onto digital label Raspberry Pi.
